Art Unit: 1652

Restriction to one of the following inventions is required under 35

U.S.C. 121:

- I. Claims 1-24, drawn to a method of treating a patient comprising administering a choline acetyltransferase protein, classified in class 424, subclass 94.5.
- II. Claims 25-60, drawn to a method for screening for a compound for choline acetyltransferase agonist or antagonist activity, classified in class 435, subclass 15.
- III. Claims 61-92, drawn to a method of treating a patient comprising administering an agonist of a choline acetyltransferase protein, classified in numerous classes and subclasses depending upon the identity of the agonist.
- IV. Claims 93-124, drawn to a method of treatment comprising administering an antagonist of a choline acetyltransferase protein, classified in numerous classes and subclasses depending upon the identity of the antagonist.
- V. Claims 125-144, drawn to a method of diagnosing a disorder comprising determining the level of a nucleic acid encoding a choline acetyltransferase or the level of the choline acetyltransferase in the patient, classified in class 435, subclass 15.
- VI. Claims 145-148, drawn to a method of treating a patient comprising administering a polypeptide that encodes a choline acetyltransferase, classified in class 514, subclass 44.

The inventions are distinct, each from the other because:

The instant methods are drawn to using different substances to obtain different results and are patentably distinct.

Art Unit: 1652

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
